# Service Manual

MODEL

RD-711

## GENERAL DESCRIPTION

The Model RD-711 is a four-track, three-speed stereo tape recorder that operates in a vertical and horizontal position. It incorporates solid state electronic circuitry and will operate on a conventional (120 volts, 60 cycles) (240, 220, 200, 110 volts, 50/60 cycles) power outlet.

Jacks are provided for connecting an external speaker, external amplifier and for recording directly from an external source, such as radio or phonograph.

The right and left channels are independent, making it possible to record on one channel while playing back the other.

## **SPECIFICATIONS**

Type:

Solid - State Amplifier, Wooden

Leatherette Cabinet, 7" Reel Capacity, Vertical/Horizontal Operation,

4-Track Stereo Tape Recorder

Power Source: AC 1

AC 120 V, 60%, AC 240, 220, 200,

110V, 50/60%

Power Consumption: 40W

Tape Speed:

7 1/2" ips (19 cm/sec), 3 3/4" ips

(9.5 cm/sec) and 1 7/8" ips (4.8

cm/sec)

Recording Track:
Recording System:

4-Track, 2-Channel AC Bias (85K %) AC Erase (85K %)

Erasing System: Recording Time:

4-Track Stereo, 60 minutes at 7 1/2"

ips (19 cm/sec)

4-Track Monaural, 120 minutes at 7 1/2" ips (19 cm/sec) with (1200 ft,

370m Tape)

Rewind Time:

Within 2 minutes (1200 ft, 370m Tape)

Fast Forward Time: Within 2 minutes (1200 ft, 370m Tape)

Power Output:

Maximum 2.8 W×2

Undistorted 1.9 W×2

Tape Heads:

Stereo 1/4 Track Record/Playback×1

Stereo 1/4 Track Erase ×1

Speakers:

Two 7  $1/2'' \times 4''$  (19cm×10cm)

P.M. 8 ohm

Transistors:

 $2SB-73\times2$ ,  $2SB-75\times6$ ,  $2SB-370\times4$ ,

 $2SB-156\times2$ 

Input Circuit:

Microphone Input, 200 ohm Auxiliary Input, 500 K ohm

Output Circuit:

External Amplifier, 2 K ohm

External Speaker, 8 ohm

Monitoring:

Built-in Speaker Sound Monitoring

System

Recording Level Indicator: VU Meter

Microphone: Bar Type

Bar Type Dynamic Microphone,

200 ohm

Dimensions:

 $243/4''(W) \times 153/8''(H) \times 71/8''(D)$ 

 $63 \text{ cm } (W) \times 39 \text{ cm}(H) \times 18 \text{ cm } (D)$ 

Weight:

33 lbs. (15 kgrs.)

## DESIGNATION OF PARTS

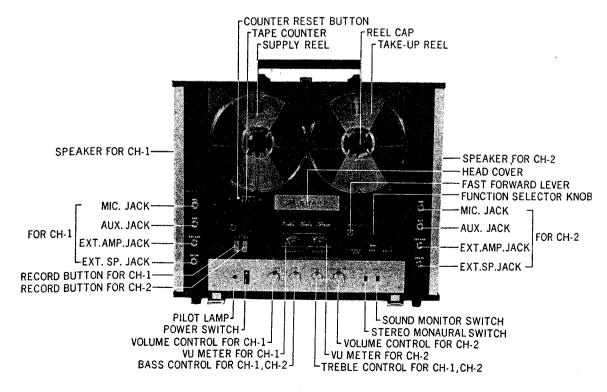

Figure 1

# FUNCTION OF CONTROLS

#### FUNCTION SELECTOR CONTROL (Refer to Figure 2, Figure 3)

The function selector is used to actuate or stop the movement of the tape and select the direction of its movement.

The five operating modes are as follows.

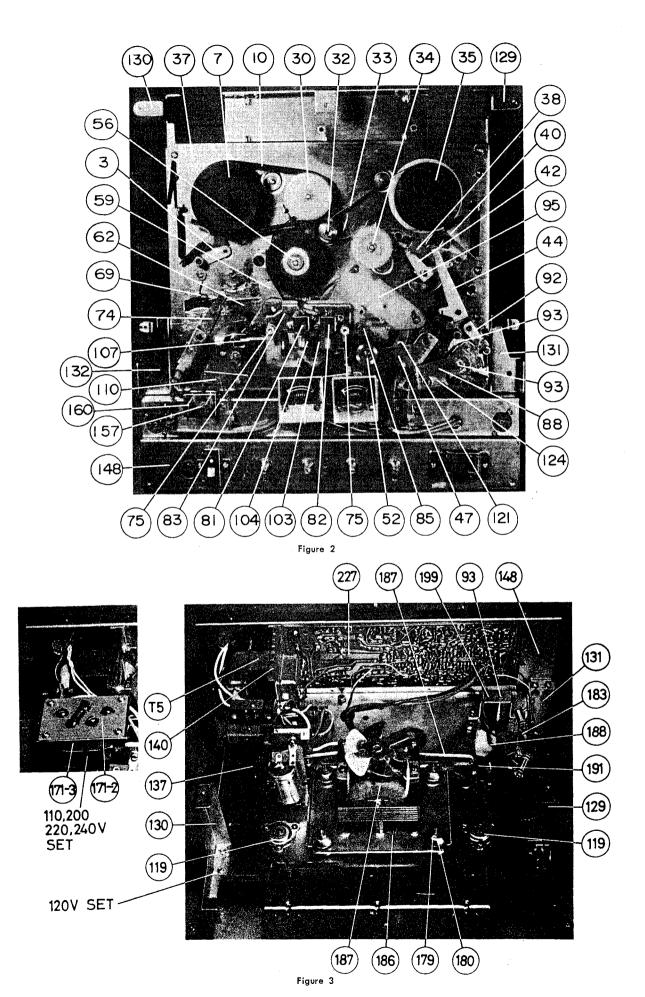

#### (1) FORWARD PLAY (Refer to Figure 4)

Set the FUNCTION SELECTOR KNOB (87) in the FORWARD PLAY position.

- 1. The FUNCTION SELECTOR CAM PLATE (93) rotates so that the ROD (187) actuates the BRAKE LEVER (44) and the BRAKE PAD (29) are disengaged from the TAKE-UP REEL SPINDLE (35).
- 2. Movement of the ROD (187) is transmitted to the TENSION ROLLER LEVER (38) so that the TENSION ROLLER (34) is pressed against the CLOTH BELT (33), the rotation of the MOTOR PULLEY (32) is transmitted to the TAKE-UP REEL SPINDLE (35) and the TAKE-UP REEL SPINDLE takes up the tape.
- 3. The IDLER LEVER (59) moves in the direction of the arrow cooperating the CAM PLATE (193) so that the IDLER (56) is engaged with the MOTOR PULLEY (32) and the FLY-WHEEL (121), driving the FLY-WHEEL (56) and CAPSTAN (121).
- 4. The FUNCTION SELECTOR CAM PLATE (93) moves the PINCH ROLLER LEVER (47) so that the PINCH ROLLER (52) is pressed firmly against the CAPSTAN SHAFT (121) driving the tape.
- 5. The TAPE PAD PLATES (103) (104) press the tape firmly against the TAPE HEADS (81) and (82) by the movement of the PINCH ROLLER LEVER (47).

#### (2) RECORD (Refer to Figure 4)

In order to operate this recorder in the RECORD mode, the RECORD BUTTON (155) must be depressed before the FUNCTION SELECTOR KNOB (87) is set to FORWARD PLAY position. This action causes the RECORD BUTTON to be locked in depressed position thus activating the RECORD circuits of the PRINTED CIRCUIT BOARD ASSEMBLY (227) so that erase current is applied to the ERASE HEAD (81), record bias is applied to the RECORD/PLAYBACK HEAD (82), and the output of the record circuit is applied to the LEVEL METERS (M1) and (M2) for monitoring purpose.

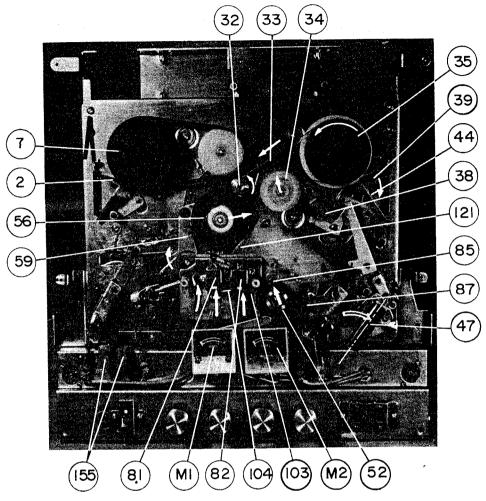

Figure 4

#### (3) STOP (Refer to Figure 5)

With the FUNCTION SELECTOR KNOB (87) set in this position, the BRAKE PADS (2) and (39) are pressed against the REEL SPINDLES (7) and (35), but all other mechanical functions are at idle.

### (4) REWIND (Refer to Figure 6)

When the FUNCTION SELECTOR KNOB (87) is set in this position, FUNCTION CAM PLATE (93), CAM PLATES (191) (193) and RODS (187) (188) move in the reverse direction of the FORWARD PLAY position. The BRAKE LEVERS (3) and (40) are disengaged from the REEL SPINDLES (7) and (35), and the REWIND PULLEY (30) is pressed against the MOTOR PULLEY (32) so that the rotation of the MOTOR PULLEY (32) is transmitted to the SUPPLY REEL SPINDE (7) through the RUBBER BELT (10) causing the SUPPLY REEL SPINDLE (7) to be driven in a clockwise direction.

Note that in this operating position, the TENSION ROLLER (34) does not engage the CLOTH BELT (33), the TAPE PAD PLATE (103) (104) and the PINCH ROLLER (52) do not engage the tape, but IDLER (56) and FLY WHEEL (121) are rotating.

## (5) FAST FORWARD (Refer to Figure 7)

To increase the speed at which the tape is wound up on the TAKE-UP REEL, a FAST FORWARD CONTROL has been provided. This control may be used only when the FUNCTION SELECTOR KNOB (87) is set in the FORWARD PLAY position.

When the FAST FORWARD KNOB (66) is pushed as far to the upward as possible, the FAST FORWARD LEVER (88) is locked into position, the TENSION ROLLER (34) applies greater tension to the CLOTH BELT (33), the TAPE PAD PLATES (103) (104) and the PINCH ROLLER (52) are disengaged from contact with the tape. In order to discontinue FAST FORWARD operation, the FUNCTION SELECTOR KNOB (87) must be reset to STOP position.

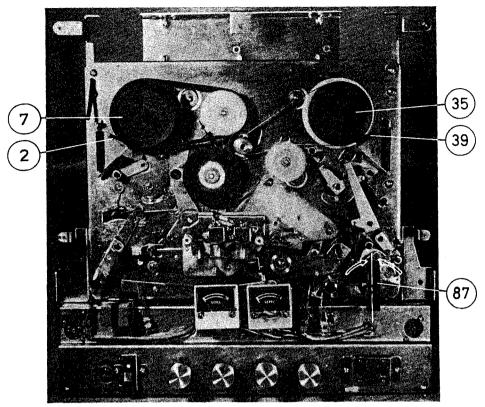

Figure 5

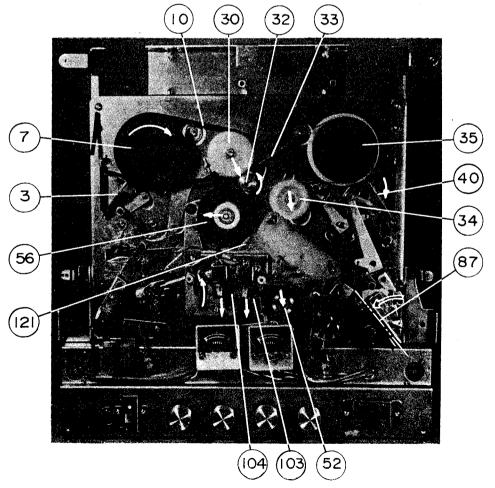

Figure 6

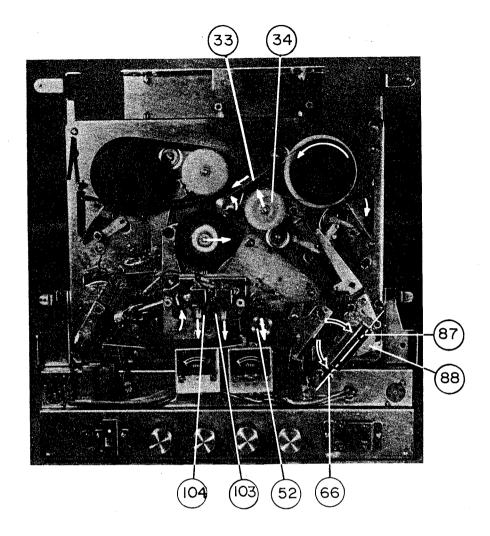

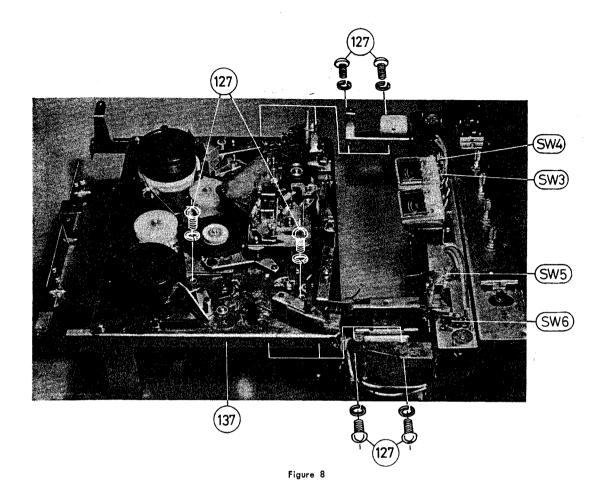

Figure 7

# FUNCTION OF LEVER SWITCHES (Refer to Figure 8 and Schematic Diagram)

- (1) The LEVER SWITCH (SW4) operates as a muting switch so that the speaker doesn't sound in the REWIND, FAST FORWARD, and STOP modes.
- (2) The LEVER SWITCH (SW3) operates as a record safety switch. Power is supplied to the oscillating circuit in the FORWARD mode only and prevents the tape from being erased in the REWIND, and FAST FORWARD mode.
- (3) The LEVER SWITCH (SW5) operates as a record equalizer switch. The switch turns off when the set is put in the 7 1/2 ips (19cm/sec) speed operation and turns on when the set is put in the 3 3/4 (9.5cm/sec), 1 7/8 (4.8 cm/sec) ips operation.
  - The record equalizer circuit is changed according to the tape speed in each case.
- (4) The LEVER SWITCH (SW6) operates as a playback equalizer switch. When the recorder is set in the 7 1/2 ips tape speed operation, the switch turns on, in the 3 3/4, 1 7/8 ips operation turns off. The playback equalizer circuit is changed according to the tape speed in each case.

## DISASSEMBLY PROCEDURE

#### MECHANISM ASSEMBLY REMOVAL (Refer to Figure 9)

- 1. Remove the VOLUME CONTROL KNOB (144), and the TONE CONTROL KNOB (144).
- 2. Remove the FAST FORWARD KNOB (66) and the SPEED SELECTOR KNOB (66).
- 3. Remove the FUNCTION SELECTOR KNOB (87), loosening the SET SCREW (86).
- 4. Remove the HEAD COVER (228).
- 5. Remove the 5 SCREWS (220) retaining the REEL PANEL (215).
- 6. Remove the 2 SCREWS (218) retaining the DECK COVER (214).
- 7. Remove the REEL PANEL (215) and the DECK COVER (214).

Caution: Remove the COUNTER BELT (15) on the TAPE COUNTER (16) provided on back of the REEL PANEL, when removing the REEL PANEL and the DECK COVER.

- 8. Disconnect the SPEAKER (SP1) (SP2) lead tips.
- 9. Unplug the CONNECTOR PLUGS (PL1) and (PL2).
- 10. Remove the 2 SCREWS (127) retaining the MECHANISM CHASSIS (137) on the CABINET (204).
- 11. Remove the 2 SCREWS (219) retaining the HANDLE (207).
- 12. Remove the 4 SCREWS (233) on the bottom of the CABINET (204) retaining the CABINET to the MECHANISM CHASSIS (137).

Then the mechanism assembly can be removed from the cabinet.

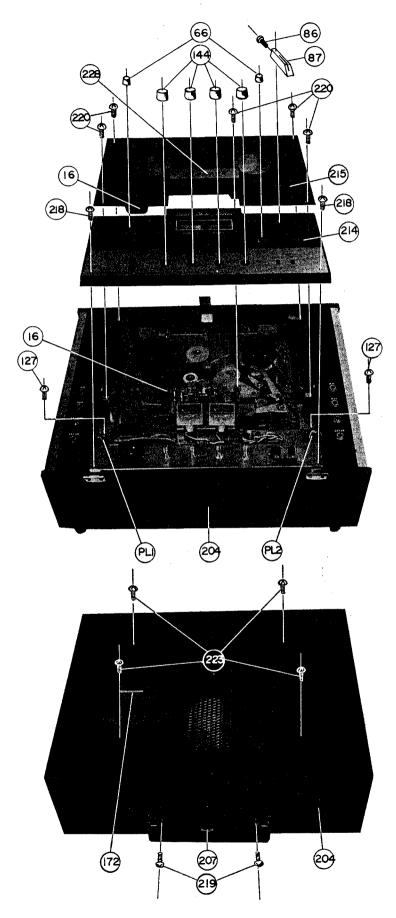

Figure 9

#### AMPLIFIER CHASSIS ASSEMBLY REMOVAL (Refer to Figure 8, Figure 10)

When the mechanism chassis assembly is removed from the cabinet, the PRINTED CIRCUIT BOARD ASSEMBLY (227) is accessible for servicing. But when removing the amplifier assembly, follow the next procedure, if necessary.

- 1, Disconnect the HEADS LEADS (1) and (2), the AUTOMATIC SHUT-OFF SWITCH (SW8) LEADS (3), and the MOTOR LEADS (4). (Refer to Figure 10)
- 2. Remove the 2 SCREWS (127) on the MECHANISM CHASSIS (137). (Refer to Figure 8)
- 3. Remove the 4 SCREWS (127) both sides of the MECHANISM CHASSIS (137).

Caution: When removing the amplifier assembly, take care not to damage the LEVER SWITCHES (SW3, SW4, SW5, SW6).

#### HEAD ASSEMBLY REMOVAL (Refer to Figure 11, 14)

Remove the SCREW (78), then the HEAD ASSEMBLY can be removed. Disconnect the head leads, if necessary.

#### FLY-WHEEL ASSEMBLY REMOVAL (Refer to Figure 12)

- 1. Set the tape recorder to STOP position.
- 2. Remove the SPRING (113).

1

4

3. Remove the 3 SCREWS (94) and the SCREW (49).

Then the SUB CHASSIS (95) can be removed along with the HEAD ASSEMBLY and the FLY-WHEEL (121). Disconnet the head leads, if necessary.

Caution: When removing the FLY-WHEEL ASSEMELY, take care not to lose the BALL BEARING (122) and damage the AUTOMATIC SHUT-OFF SWITCH LEVER (107).

#### MOTOR ASSEMBLY REMOVAL (Refer to Figure 3)

Remove the 4 SPECIAL SCREWS (179), then the MOTOR ASSEMBLY can be removed.

#### MOTOR PULLEY REMOVAL (Refer to Figure 13)

Loosen the 2 SET SCREWS (31) mounted on the MOTOR PULLEY (32) with 3 mm hex-wrench.

The Motor pulley should be changed according to the power source cycles. Index number on the motor pulley shows the power source cycles.

(Refer to the article of POWER SOURCE CYCLES CHANGING.)

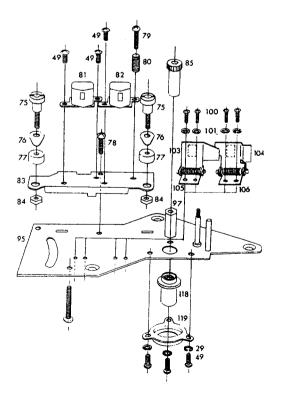

Figure 14

## MECHANISM ADJUSTMENT

#### RECORD/PLAYBACK HEAD (82) (Refer to Figure 14)

- 1. With the recorder in operating condition, thread standard test tape on recorder and operate in PLAYBACK mode.
- 2. ADJUST the SCREW (49) of the RECORD/PLAYBACK HEAD (82) to obtain maximum output and best reproduction of high frequencies using the azimuth alignment tape.

#### HEADS (81) (82) HEIGHT (Refer to Figure 11 and Figure 14)

- 1. Remove the HEAD ASSEMBLY removing the SCREW (78).
- 2. Loosen the CLUMP NUTS (84) on the back of the HEAD MOUNT (83) so that the TAPE GUIDES (75) can be adjusted.
- 3. Reassemble the HEAD ASSEMBLY fixing the SCREW (78).
- 4. Thread a quater-track test tape.
- 5. Operate the recorder in the FORWARD PLAY mode with the VOLUME CONTROLS set on maximum, and adjust the TAPE GUIDE (right) (75) for maximum output from the tape.
- 6. Next, operate the recorder in the RECORD mode with the VOLUME CONTROLS set on minimum and signal source disconnected from the recorder using other tape and erase the tape.
- 7. If the tape is not completely erased, adjust the TAPE GUIDE (75) (left).
- 8. After complete alignment is attained, tighten the CLUMP NUTS (84) removing the HEAD ASSEMBLY and then fix it on the original position.

#### TAPE PADS (Refer to Figure 14)

While using a standard test tape and operating the recorder in PLAYBACK mode, loosen the TAPE PAD ASSEMBLY RETAINING SCREWS (100) and position the BRACKET (106) (R/P Head) to obtain maximum output.

While using an other recorded tape and operating the recorder in RECORD mode and position the BRACKET (106) (Erase Head) to obtain complete erase.

When proper positioning is obtained, tighten down the retaining screw (100).

## SHUT-OFF SWITCH (SW8) (Refer to Figure 15)

Loosen the two SCREWS (201(A), (B)).

Set the recorder in FORWARD PLAY mode and position the SHUT-OFF SWITCH (SW8) rotating it around the SCREW 201 (A), checking to see that power is supplied to the recorder while tape is running and switched off while tape is out. Fasten the SCREWS (201) after proper timing is attained.

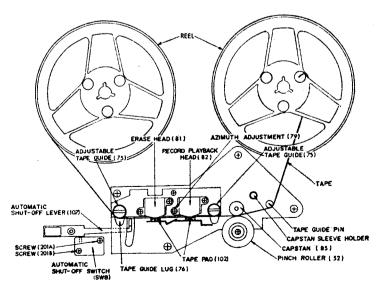

Figure 15

#### MISCELLANEOUS OPERATING SPECIFICATIONS (Refer to Figure 16)

- 1. When operating at tape speed of 7½ ips (19 cm/sec), the pinch roller tension should be between 900 and 1000 grams.
- 2. When operating in PLAYBACK mode, take-up torque should be between 25 and 50 grams.
- 3. When operating in FAST FORWARD mode, take-up torque should be between 90 and 130 grams.
- 4. When operating in REWIND mode, take-up torque should be between 90 and 110 grams.
- 5. Tape pad pressure should be maintained between 20 and 30 grams. (Refer to Fig. 16 for proper method of measuring torque)

## **ELECTRICAL MEASUREMENTS**

#### PLAYBACK AMPLIFIER SENSITIVITY (Refer to Schematic Diagram)

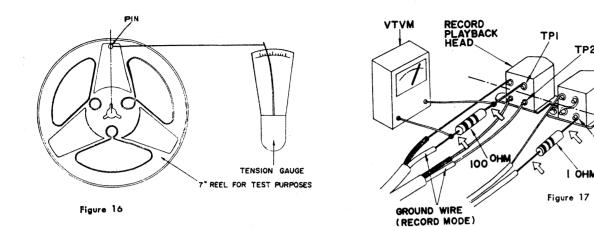

- 1. Set the recorder in STEREO PLAYBACR mode with the VOLUME CONTROLS in maximum.
- 2. Set a 8 ohm dummy resistor (2W, 5%) across the EXTERNAL SPEAKER jacks (J4, J8) of the both channels.
- 3. Connect the Sine Wave Generator for 1000 cps,-68dB (=0.4mV), OdB=1V across the CH-1 and CH-2 terminals of the RECORD PLAYBACK HEAD (82).
- 4. Connect an AC VTVM across the 8 ohm dummy resistor of the CH-1 EXT. SP jack (J4). If the playback amplifier sensitivity is normal, the leading on the VTVM should be approximately 2.4 V.
- 5. Adjust the VARIABLE RESISTOR (R98) so that the output of the 8 ohm dummy resistor of CH-2 becomes equal to the output of the 8 ohm resistor of CH-1.

#### RECORD AMPLIFIER SENSITIVITY (Refer to Figure 17 and Schematic Diagram)

- 1. Set the recorder in STEREO RECORDING mode with the VOLUME CONTROLS in maximum.
- 2. Put some insulator (paper, etc.) between the contacting leaves of the RECORD SAFETY LEVER SWITCH (SW3) to stop the BIAS OSCILLATION.
- 3. Unsolder the ground wire connection at the RECORD/PLAYBACK HEAD (82) (on the schematic diagram, this connection is designated as TP1, TP2) and insert a 100 ohm resistor (1/2W, 5%) between the open connection on the tape head and the open end of the wire that was removed.
- 4. Connect the Sine Wave Generator for 1000 cps, -78dB (0.13 mV), Odb=1V across the MICROPHONE jacks (J1, J5).
- 5. Connect an AC VTVM across the 100 ohm resistor. If the record amplifier sensitivity is normal, the reading of the VTVM should be approximately 3.6 mV.
- 6. In this condition, adjust the VARIABLE RESISTOR (R96, R97) so that the needle of the VU METERS (M1) and (M2) point the proper position on the scale. (Between the white and red area)

#### RECORD BIAS (Refer to Figure 17)

- 1. Set the recorder in STEREO RECORDING mode with the VOLUME CONTROLS in minimum.
- 2. Insert a 100 ohm resistor (1/2W, 5%) in the ground lead of the RECORD/PLAYBACK HEAD (82).
- 3. Connect an AC VTVM across the 100 ohm relistor.
- 5. Adjust the TRIMMER CONDENSER (C61: CH-1, C62: CH-2) so that the reading on the VTVM should be approximately 85 mV.

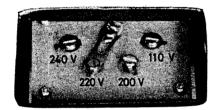

Figure 18

#### ERASE VOLTAGE (Refer to Figure 17)

- 1. Set the recorder in STEREO RECORDING mode.
- 2. Unsolder the ground wire connection at the ERASE HEAD (81) (On the schematic diagram, it is shown as TP3) and insert a 1 ohm resistor (1 W, 5%).
- 3. Connect an AC VTVM across the 1 ohm resisor.

  If the set is normal, the reading on the VTVM should be approximately 30 mV.

# POWER SOURCE VOLTAGE CHANGING (110, 200, 220, 240V, 50/60 % Set Only) (Refer to Figure 18 and 8)

- 1. Remove the Lid (172) (Power Source Voltage Changing Lid) on the Cabinet Bottom.
- 2. Set the power voltage changing tip on the proper terminal according to any convenient outlet.

## POWER SOURCE CYCLES CHANGING (110, 200, 220, 240V, 50/60% Set Only)

1. Replace the MOTOR PULLEY (32) (Refer to Fig. 13).

For 60 cycles: Index No. 0, 1, 2, 3, 4 For 50 cycles: Index No. 5, 6, 7, 8, 9

Example: 60 cycles No. 2 corresponds to 50 cycles No. 7

50 cycles No. 9 corresponds to 60 cycles No. 9

2. Change the lead wire connection of the MOTOR (178). (Refer to Schematic Diagram)

For 60 %, the yellow lead of the MOTOR (178) should be connected to 120 V tap of the POWER TRANSFORMER (T6).

For 50 %, the yellow lead of the MOTOR (178) should be connected to 110 V tap of the POWER TRANSFORMER (T6).

# MAINTENANCE

#### **CLEANING**

CH.I

The pinch roller, capstan, tape guides, record/playback head, erase head may accumulate tape oxide coating worn off the tape as it passes these parts. This accumulation will cause poor performance and should be removed with a soft lint-free cloth moistened with commercial head cleaner or alcohol.

#### LUBRICATION

Sliding bearing surface should be cleaned with a clean soft cloth and light grease applied. Rotating bearing such as pulley and motor bearings should be oiled sparingly with light non-detergent oil. Avoid excess lubrication.

Any excess oil or grease on pulleys, belts or capstan should be removed with a cloth moistened with alcohol.

#### DEMAGNETIZING THE HEADS

The heads may become magnetized by using an ohm-meter on them or their associated circuitry, or by a strong magnetic field near them such as a solder gun of speaker. Magnetized head will cause hiss or even partial erasure of tapes.

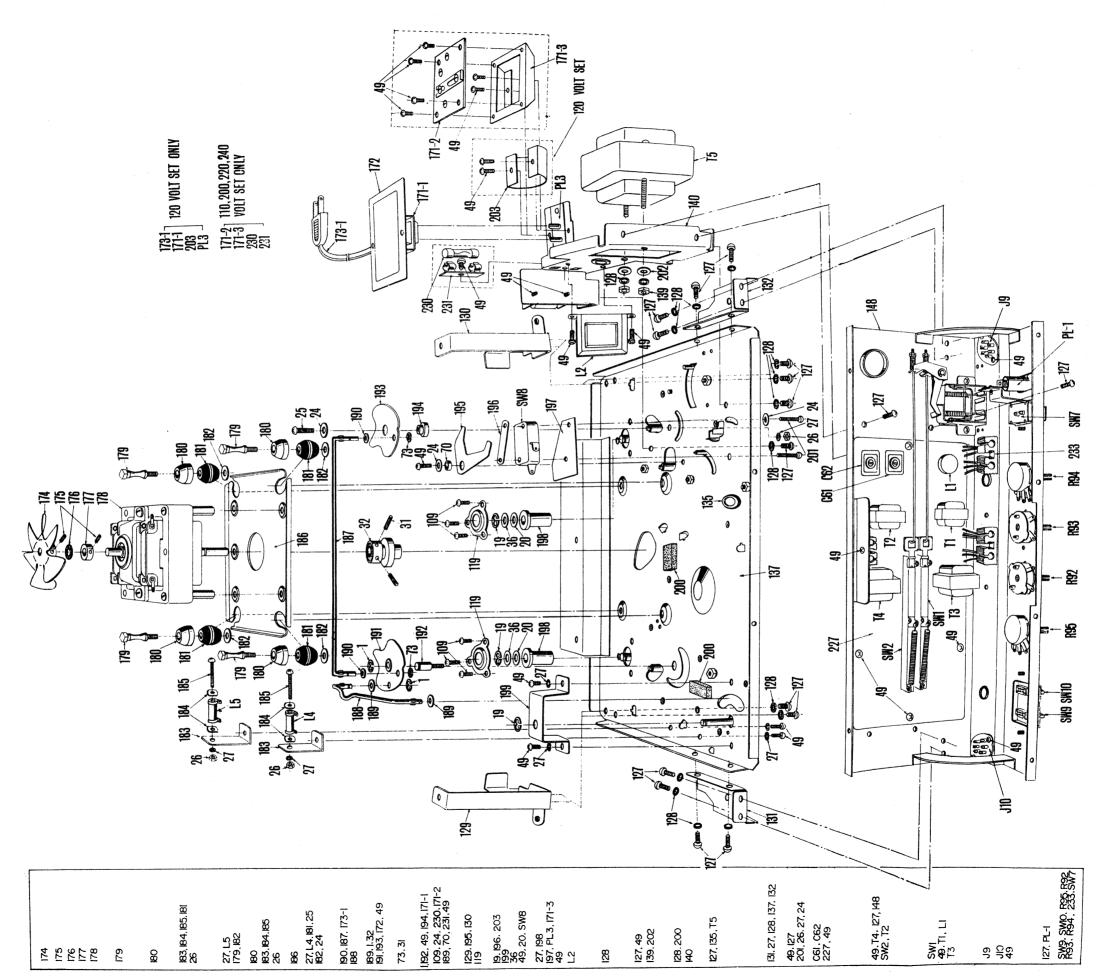

If heads should become magnetized, they can be demagnetized by use of a head demagnetizer. Move the demagnetizer slowly around both heads (Be careful not to scratch the brass surface that contacts the tape), and all parts in the tape path. Be sure to turn the magnetizer off only when it is away from the heads, as it may actually magnetize the heads. Also, keep the demagnetizer away from the recording tape.

# TROUBLE CHART (MECHANISM)

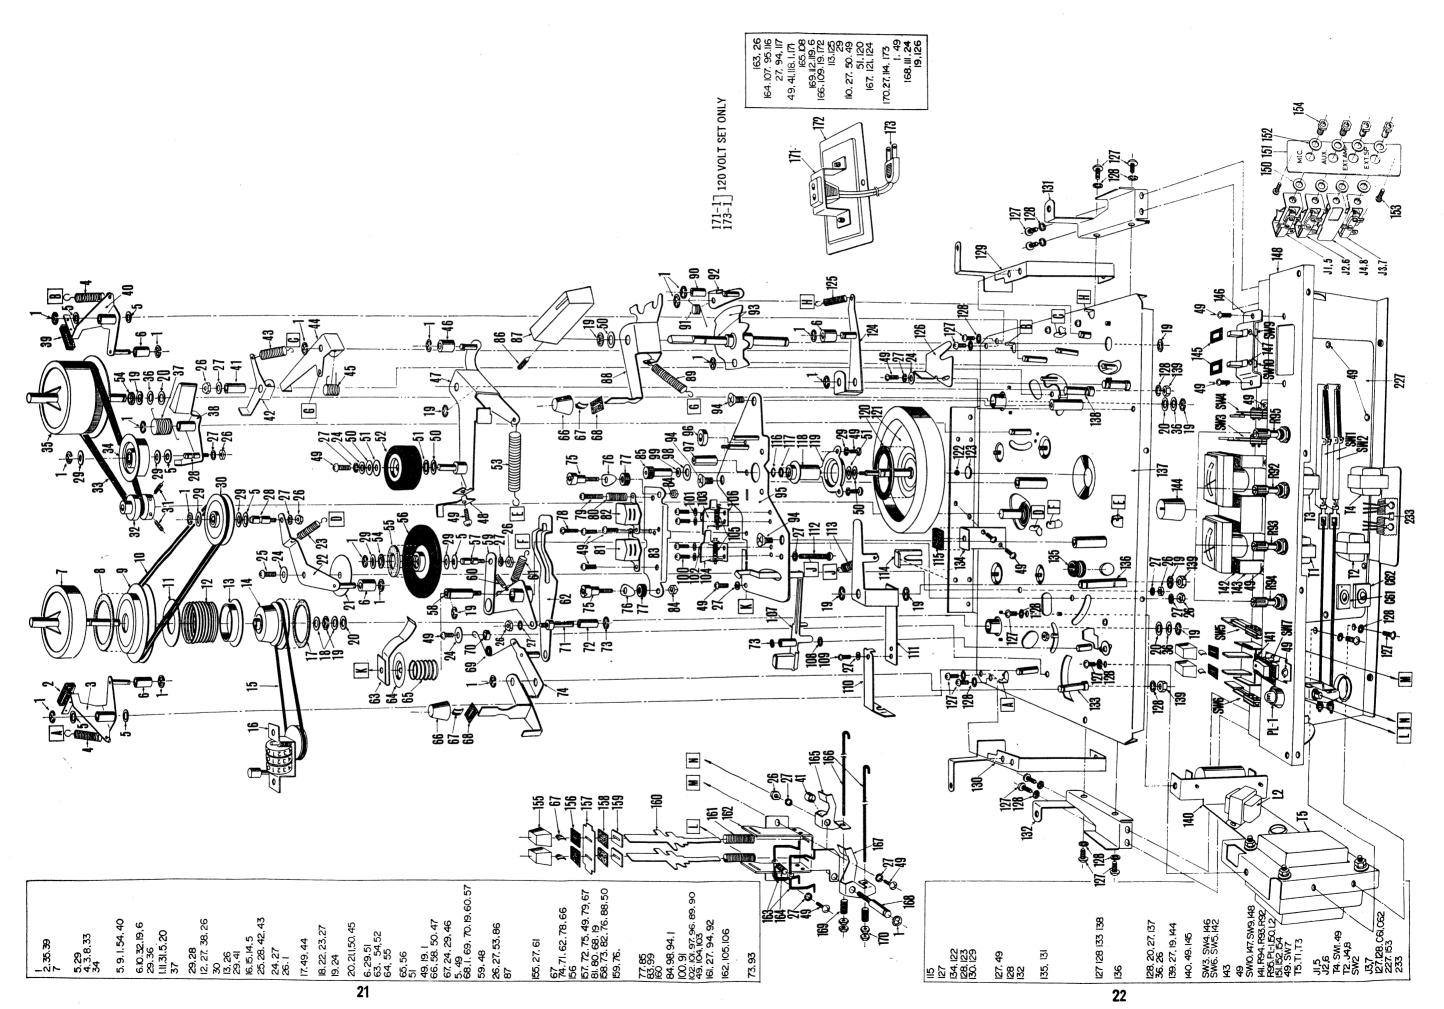

SYMPTOM	CAUSE	REMEDY
Excessive wow	1. Dirty PINCH ROLLER (52) and/or CAPSTAN (121).	Wipe with a soft cloth swab soaked in alcohol.
	2. Improper pressure of TAPE PAD (102), PINCH ROLLER (52) and IDLER (56).	2. Adjust them for paper tension.
	3. PINCH ROLLER (52) and IDLER (52) deformed.	3. Replace PINCH ROLLER (52) and IDLER (56).
	4. Improper back tension.	4. Replace REWIND RUBBER BELT (10), COUNTER BELT (15) or clean RUBBER BELT, COUNTER BELT, REWIND PULLEY (30), COUNTER PULLEY and their shaft.
Improper tape speed.	1. Insufficient PINCH ROLLER (52) pressure.	Adjust or replace PINCH ROLLER TENSION SPRING (53).
	2. Dirt or oil on PINCH ROLLER (52), CAPSTAN (121), IDLER (56), MOTOR PULLEY (32) and FLY WHEEL (121).	2. Clean them using a soft clean cloth swab soaked in alcohol.
Improper brake action.	1. BRAKE PADS (2) (39) worn out.	1. Replace BRAKE PADS (2) and (39).
	2. BRAKE SPRING (4) aged.	2. Replace BRAKE SPRINGS (4).
Improper operation of tape	1. IDLER SPRING (65) aged.	1. Replace SPRING (65).
speed change.	2. IDLER LEVER (59) operation is not smooth.	2. Replace IDLER LEVER (59) or lubricate on IDLER LEVER SHAFT (58) after cleaning.
Improper take-up of tape in PLAYBACK mode.	1. TENSION ROLLER (34) not operating properly.	Lubricate and/or adjust TENSION ROLLER LEVER (38).
	2. TENSION ROLLER (34) binding.	2. Repair or replace TENSION ROLLER (34).
	3. Defective TENSION ROLLER SPRING (37).	3. Repair or replace TENSION ROLLER SPRING (37).
	4. TAKE-UP REEL SPINDLE (35) does not rotate freely.	4. Clean and lubricare TAKE-UP REEL SPINDLE and SPINDLE SHAFT (35).
Improper operation in FAST FORWARD mode.	1. TENSION ROLLER (34) pressure is too weak.	Adjust tension of FAST FORWARD LEVER SPRING (89).
	2. TENSION ROLLER ACTUATING LEVER (44) not operating properly.	2. Lubricate and/or adjust TENSION ROLLER ACTUATING LEVER SHAFT.
Improper operation in REWIND mode.	1. REWIND RUBBER BELT (10) broken.	1. Replace RUBBER BELT (10).
	2. REWIND BELT (10) and REWIND PULLEY (30) oily.	2. Clean BELT (10) and PULLEY (30) with soft cloth soaked in alcohol.
	3. Slip mechanism in SUPPLY REEL SPINDLE (7) not operating properly.	3. Adjust or replace SUPPLY REEL SPINDLE (7) slip mechanism.
Improper operation in PLAY-BACK, FAST FORWARD and REWIND.	1. MOTOR PULLEY (32) loose on MOTOR (178) drive shaft.	1. Properly position MOTOR PULLEY (32) and tighten SET SCREWS (31).
TAPE COUNTER inoperative.	COUNTER BELT (15) broken or out of the COUNTER PULLEY groove.	Replace or set COUNTER BELT (15) properly.

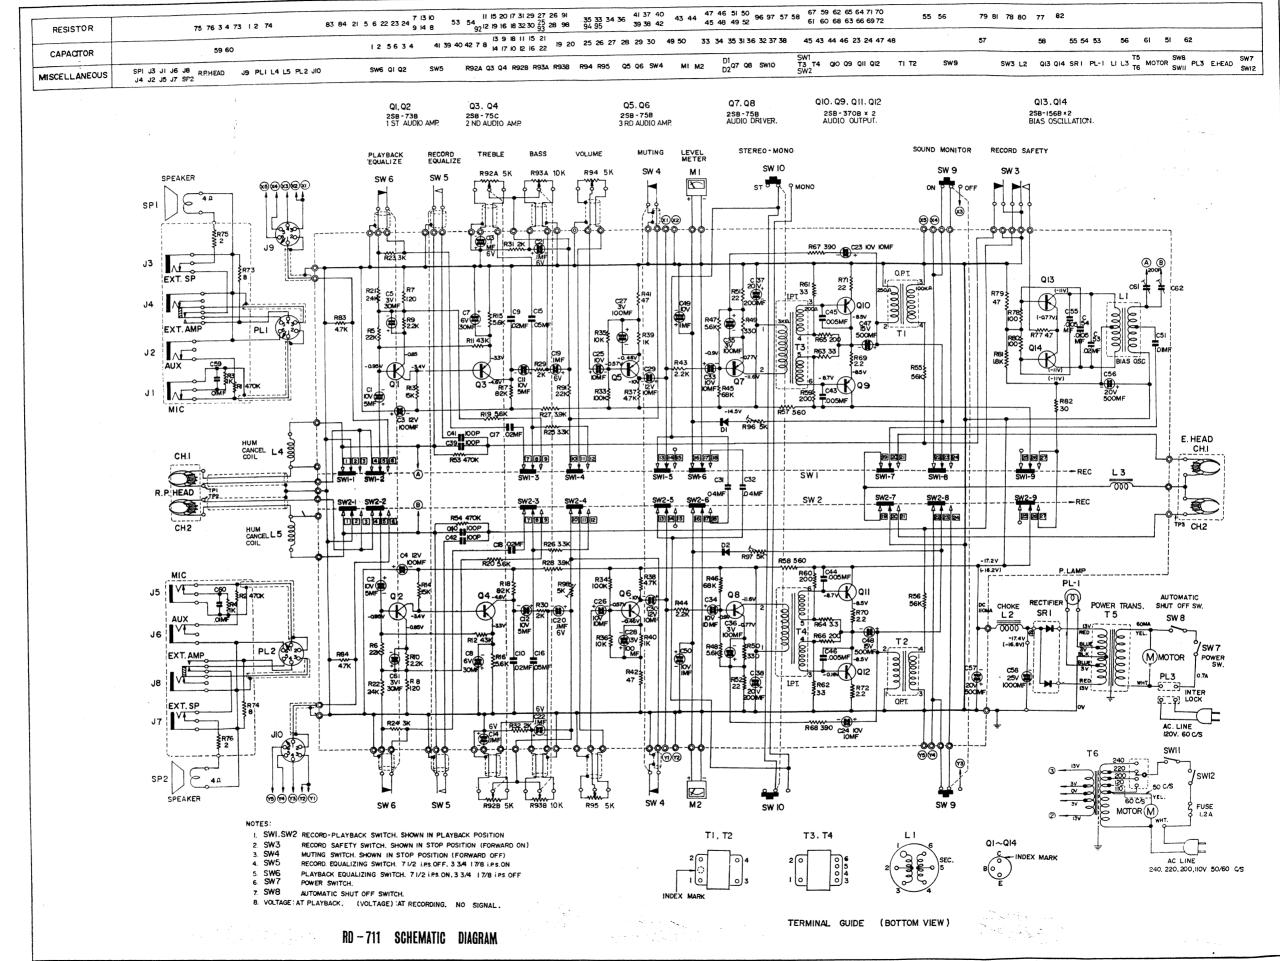

# TROUBLE CHART (AMPLIFIER)

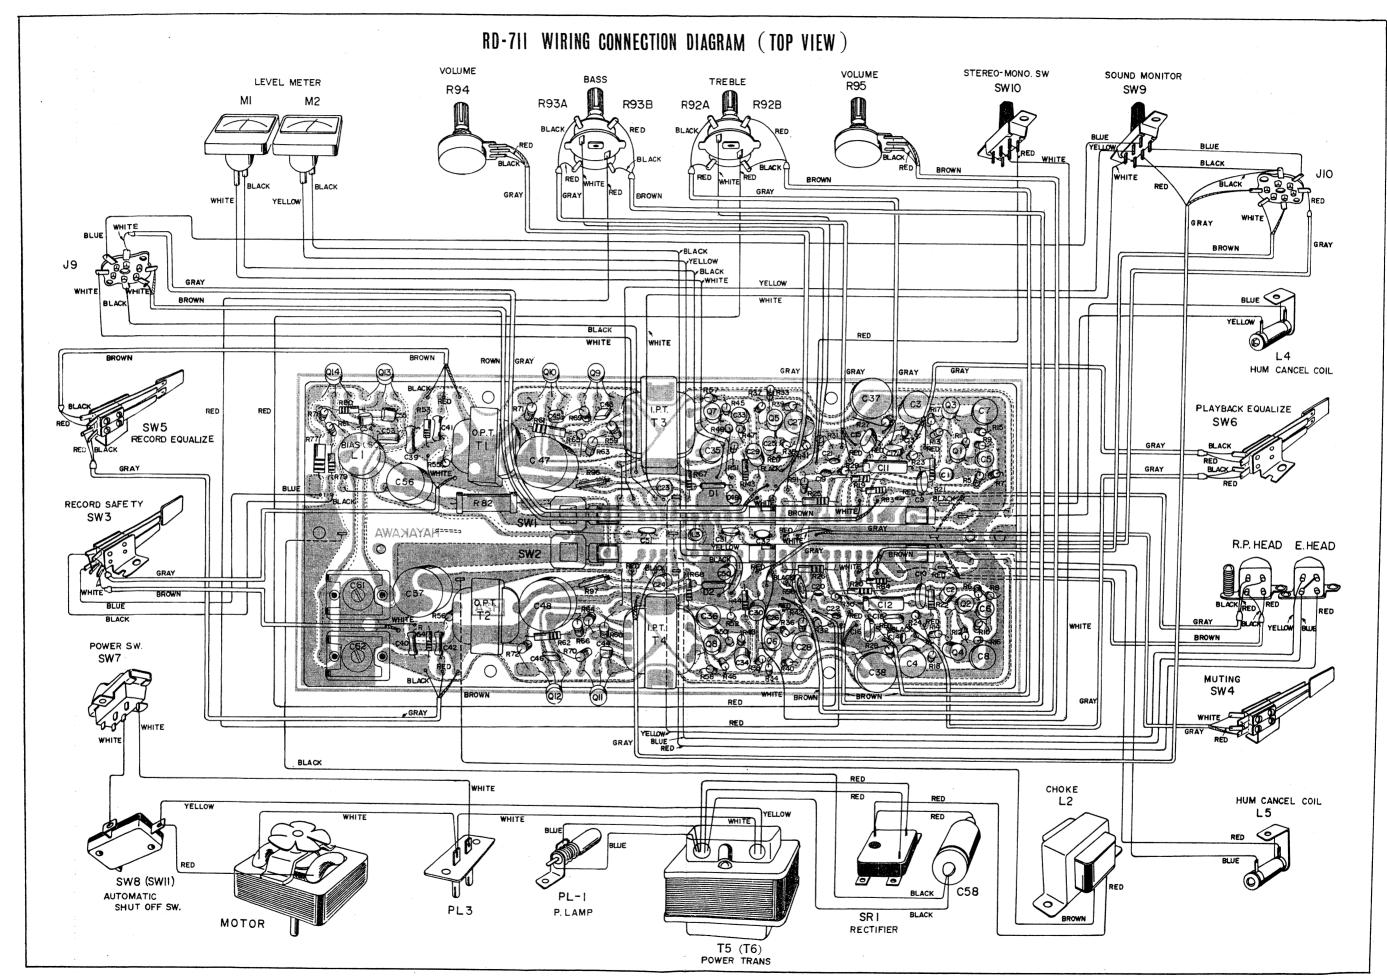

SYMPTOM	CAUSE	REMEDY
Mechanism operating but no PLAYBACK or RECORD.	1. RECORD/PLAYBACK HEAD (82) defective.	1. Replace RECORD/PLAYBACK HEAD (82).
TENTEN OF RECORD.	2. Connecting leads to RECORD/PLAY-BACK HEAD (82) open or shorted.	2. Check and repair the leads.
	3. Defect in PRINTED CIRCUIT BOARD ASSEMBLY (227).	3. Check and repair the electronic circuit.
PLAYBACK normal but will not RECORD.	Defective RECORD/PLAYBACK SWITCH (SW1, SW2).	1. Repair or replace the switch.
	2. Defective MICROPHONE and MIC or AUX. jack or connecting leads.	2. Check and repair or replace.
	3. Defect in PRINTED CIRCUIT BOARD ASSEMBLY (227).	3. Check and repair the electronic circuit.
Will not PLAYBACK.	Defective MUTING LEVER SWITCH (SW4).	1. Repair or replace the switch.
	2. Defective RECORD/PLAYBACK SWITCH (SW1, SW2).	2. Check and replace the switch.
	3. Defective SPEAKER (SP1, SP2) or connecting leads.	3. Repair or replace the speaker and its leads.
Sound quality poor in PLAY-BACK mode.	1. RECORD/PLAYBACK HEAD (82) dirty.	Clean the head with a soft cloth swab soaked in alcohol.
	2. RECORD/PLAYBACK HEAD (82) magnetized.	2. Use a head magnetizer.
	3. EQUALIZER LEVER SWITCH (SW5, SW6) defective.	3. Repair or replace the switch.
	4. Insufficient TAPE PAD (102) pressure.	4. Adjust TAPE PAD BRACKET (106) position.
	5. Improper BIAS CURRENT applied to RECORD/PLAYBACK HEAD in RECORD mode.	5. Adjust BIAS CURRENT.
	6. Defective TAPE.	6. Replace TAPE.
Recorded tape does not PLAY-BACK properly on other recorder.	RECORD/PLAYBACK HEAD (82) not properly positioned.	1. Adjust RECORD/PLAYBACK HEAD (82) height or angle for proper position.
Poor ERASE or no ERASE.	1. ERASE HEAD (81) defective.	1. Replace the head.
	2. Connecting leads to ERASE HEAD (81) open or shorted.	2. Check and repair the leads.
	3. Improper current applied to ERASE HEAD (81).	3. Check and adjust ERASE HEAD current.
	4. ERASE HEAD (81) improperly positioned.	4. Adjust ERASE HEAD position.
	5. Improper TAPE PAD (102) pressure.	5. Adjust TAPE PAD BRACKET (106).
LEVEL METERS (M1) (M2) do not operate properly.	1. Defective LEVEL METER (M1) (M2) and METER RECTIFIER DIODE (D1) (D2).	1. Replace the meter and diode.
	2. VARIABLE RESISTOR (R96, R97) not properly adjusted.	2. Check RECORD AMPLIFIER SEN- SITIVITY and adjust VARIABLE RESISTOR (R96, R97).

1		THO 13 CC   DEC	Retaining Reel Pannel
22	21	W3.1MS+25S	Screw for Wood, Black,
1			3.1¢×25 mm Retaining SP Baffle
1 00	v)	3.2W9-2.0	Washer, Black Metal,
22	ک:	3.2W 9-2.0	Retaining SP Baffle
22	2	3MS+20S	Screw, Black, $3\phi \times 20$ mm
1		5W15 + 200	Cabinet Bottom
22	Δ.	REEL-CAP	Reel Cap
22		MIC-127	Microphone, Dynamic, 200
		1	ohm, IMP.
22	26	MTT-7	Empty Reel, 7"
22	27	PCB-271	Printed Circuit Board
22	28	HEAD-COVER for #2495	Head Cover, Plastic
-22	29	ATTACH-CORD #2495	9
23	30	110, 200, 220, 240V	Fuse, 1.2A
		set only	
23	31	FH-102, 110, 200, 220,	Fuse Socket
١		240V set only	D 1 1 T - 7"
	32	MTU-7A	Reel and Law Tape, 7"
[_23	33	RADIATOR for #2495	Radiator, Transistor

# SPEAKERS, METERS, PILOT LAMPS, PLUGS

Speaker, 7 1/2"×4", 4 ohm, PM (1910H-25A) Level VU Meter Pilot lamp, AC 6.3 V, 0.2 A (PL-504) Connector Plug (PG-144) Interlock Plug (PG-194) (120V Set Only)
Level VU Meter
Pilot lamp, AC 6.3 V, 0.2 A (PL-504)
Connector Plug (PG-144)
Interlock Plug (PG-194) (120V Set Only)

#### **JACKS**

J1, J5	Microphone Jack (J-903)
J2, J6 J3, J7	Auxiliary Jack (J-903) External Speaker Jack (J-935)
J4, J8 J9, J10	External Amplifier Jack (J-921) Connector Socket (SO-139)

## **TRANSISTORS**

REF. NO.	DESCRIPTION
<u> </u>	

## DIODE, RECTIFIER

D1, D2	Meter Rectifier	(1N-34A)
SR1	Rectifier	(S1-RECT-25)

#### **TRANSFORMERS**

T1, T2 T3, T4 T5 T6	Output Transformer (74-461) Driver Transformer (6T-410) Power Transformer (5T-497), 120V Set Power Transformer (5T-499), 240, 220, 200, 110V Set
------------------------------	--

#### COILS

L1 Oscillation Coil L2 Choke Coil L3 Dummy Load Coil L4, L5 Hum Cancel Coil	(4L-329 or 4L-332) (9T-429) (4L-929) (4L-938)
---	--

#### **SWITCHES**

SW1, SW2	Record/Playback Switch, Slide	(4S-81)
SW3	Record Safety Switch, Lever	(8S-13)
SW4	Muting Switch, Lever	(8S-15)
SW5	Record Equalizer Switch, Lever	(8S-17)
SW6	Playback Equalizer Switch, Lever	(8S-19)
SW7	Power Switch, Toggle (120V, Set)	(8S-35)
SW8	Micro Switch, Auto Shut-Off (120V, Set)	(8S-43)
SW9	Sound Monitor Switch, Slide	(4S-34)
SW10	Stereo-Mono Selector Switch, Slide	(4S-34)
SW11	Micro Switch, Auto Shut-Off	
	(240, 220, 200, 110V Set)	(9S-75)
SW12	Power Switch, Toggle	
	(240, 220, 200, 110V Set)	(9S-87)
1
